Building the Future of Infusion Nursing—One Discovery, One Innovation, One Patient at a Time

Dr. Jaideep Herbert

Editor
Journal of Infusion Nurses Society of India (JINS)
Official Journal of the Infusion Nurses Society (India)

Healthcare is not transformed by technology alone—it is transformed by people who continuously question existing practices, seek better solutions, and remain committed to improving patient care. Every advancement begins with curiosity, every best practice is strengthened by evidence, and every meaningful breakthrough begins with someone asking, "Can we do this better?"

It is with immense pride and optimism that I welcome you to the inaugural issue of the Journal of Infusion Nurses Society of India (JINS), the official scientific journal of the Infusion Nurses Society (India). The launch of JINS represents more than the beginning of another academic publication. It represents a vision for strengthening infusion nursing as a specialized area of practice, education, research, and leadership. The journal is intended to provide a platform where evidence meets clinical experience, innovation inspires change, and professionals from different disciplines can share knowledge that ultimately improves patient outcomes.

Infusion therapy is an essential part of modern healthcare. From peripheral intravenous access and central venous devices to oncology infusion, pediatric and neonatal care, infection prevention, extravasation management, and home infusion therapy, the complexity of infusion practice continues to evolve. With this growing complexity comes an equally important responsibility—to ensure that every patient receives care that is safe, evidence-based, competent, and compassionate.

The Journal of Infusion Nurses Society of India has therefore been established with a clear purpose: to create a trusted forum where research meets practice and clinical experience is transformed into knowledge that can be shared and applied. Whether it is original research, a quality-improvement project, a challenging case, a systematic or narrative review, a clinical practice article, or an educational innovation, every contribution can have an impact beyond the institution in which it was developed.

Today, nurses are much more than caregivers. They are researchers, educators, innovators, leaders, advocates, and contributors to healthcare policy. The future of nursing depends on our ability to ask important questions, generate evidence, evaluate our practices, and share solutions with the wider professional community.

As editor, my vision for JINS is to build a journal that is credible, relevant, inclusive, and internationally respected—a journal recognized not only for scientific and academic excellence but also for its practical contribution to patient care. This vision cannot be achieved by the editorial team alone. It requires the collective commitment of our authors, reviewers, educators, clinicians, researchers, and professional leaders.

I therefore invite nurses, physicians, researchers, educators, pharmacists, infection-prevention specialists, vascular access professionals, and healthcare leaders from India and around the world to become part of this journey. Share your research. Share your innovations. Share your clinical experiences. Share the lessons that can help another professional provide safer and better care.

Every manuscript published is more than an academic achievement. It is an opportunity to influence practice, stimulate discussion, inspire further research, and ultimately make a difference to patients.

I extend my sincere appreciation to the leadership of the Infusion Nurses Society (India), our Editorial Board, reviewers, contributors, and authors who have supported the vision and helped bring JINS to life. The establishment of this journal is a collective achievement, and its future will depend on the continued participation of the infusion nursing community.

As we turn the first page of this journey, let us remember:

- *Every discovery can improve knowledge.*
- *Every innovation can improve practice.*
- *Every published idea can influence care.*
- *And every improvement in care can change a patient's life.*

Together, let us build a future where science guides practice, innovation drives progress, and every infusion is delivered with excellence, safety, and compassion.

Welcome to the first issue of the Journal of Infusion Nurses Society of India.
